

Name: Emanuel Ramirez Alsina
Course: CS 290 – Summer Term 2020
Activity: A6 Practice
Date: 07/26/2020

Over the course of this term, I have had difficulty with only one assignment. That being the Fixing Closure Loop assignment. I got a 0/10. But with the help of the TA's comments on the assignment and some YouTube/Google search magic I came to understand my mistake in the assignment. I misunderstood the instructions. Other thing that has been somewhat difficult is, sometimes, understanding the class lecture materials. I have had to search for more context the majority of the time outside of the course material. But that's part of the process of becoming a developer. You need to learn to search for explanations and solutions on you own, not expecting everything to be handed to you on a golden plate.

Right now I'm working on the Homework 5: GET and POST assignments and I'm having a hard time fulfilling the requirements. At this moment I haven't been able to figure out how to send and receive the GET and POST request. The server is starting but nothing gets received. I'm researching the topics documentation on my own to try to figure out the reason why is not working. Eventually, I'll figure it out.
